Projects

Email Validator

- An email validator is a tool designed to verify and validate the legitimacy of email addresses, addressing various issues such as typographical errors, formatting inconsistencies, and potential security threats.
- I developed this process using references from youtube and with help of our college mentor.
- In this process I use the frontend techniques.

Skills Developed: HTML, CSS, Javascript

LOCAL LINK

- This website project aims to create a platform that connects local vendors with potential customers. It allows users to search for local vendors in new localities. The platform will enable local businesses to showcase their services, manage their online presence, and promote special offers.The website will offer a user-friendly interface, facilitating easy navigation and search functionality.
- I developed this process using some references and with help of group members.
- In this process I use frontend , backend techniques.

Skills Developed: HTML, CSS, Javascript, Figma

Achievements/ Extracurricular Activities

- Solve 100+ problems on CodeChef and earned a Bronze medal on CodeChef.

Skills

HTML | CSS | Java
